This documents contains literature that was either cited in the MOD3 Lecutre or that I think is helpful to deepen your understanding of the discussed methods. The refernces are arranged in thematic groups following the same structure as the lecture. References within each group are order alphabetically. As some references are pertinent to multiple topics you will find repetitions.

1 Comparisions of model and distance based approaches

Carlos-Júnior, L. A., Creed, J. C., Lewis, R. J., Marrs, R. H., Moulton, T. P., Feijó-Lima, R., & Spencer, M. (2020). Generalized Linear Models outperform commonly used canonical analysis in estimating spatial structure of presence/absence data. Peer J, 8

Hui, F. K. C., Taskinen, S., Pledger, S., Foster, S. D., & Warton, D. I. (2015). Model-based approaches to unconstrained ordination. Methods in Ecology and Evolution, 6(4), 399–411.

Jupke, J. F., & Schäfer, R. B. (2020). Should ecologists prefer model- over distance-based multivariate methods? Ecology and Evolution

Roberts, D. W. (2017). Distance, dissimilarity, and mean-variance ratios in ordination. Methods in Ecology and Evolution.

Roberts, D. W. (2019). Comparison of distance-based and model-based ordinations. Journal of Ecology.
